PROJECTS

AI Resume Analyzer Built a full-stack AI resume analyzer that scores resumes against 7 deterministic ATS heuristics and matches them against job descriptions using an LLM-backed pipeline. Designed a provider-agnostic AI service layer so the LLM backend can be swapped without touching the rest of the app. Deployed live with PDF report generation and AI-powered bullet rewriting using the STAR method. ([Live Demo](#))

CampusLoop Built a solo full-stack peer-to-peer rental marketplace for NIT Durgapur students to rent devices, books, and gadgets. Implemented JWT authentication restricted to verified institute emails with protected routes and backend-enforced ownership checks. Engineered real-time availability updates via Socket.io and race-condition-safe booking logic using atomic MongoDB operations to prevent double-booking. ([Live Demo](#))
